(ACB-Toronto) C\$11.93

Perspectec's Cannabis Thesis

All figures mentioned are in Canadian dollars unless otherwise indicated.

The Canadian recreational opportunity over the next 4 years available to Canadian companies dwarfs the International medical market

Following the path of Colorado, early sales are highly dependent on the # of stores. Canada is pacing to a relatively slower start

Delays w/ Ontario stores and increases in Licensed Producers' (LPs) production capacities will transform the viability of Canadian LPs in the 1st half of 2019.

The impact from food, drinks and other derivative products will be a 2021 story based on Colorado trends

The above factors will lead to wholesale, consolidated (dried flower + oil) price drops in '19 and likely '20

M&A premiums are in (LP) stock prices to various extents. However M&A makes little sense at these valuations

20x EBITDA on a scaled business is a reasonable valuation. This is in-line with other established 'getting high' beverage companies.

Questionable Locations

We estimate 16% of Canadian cannabis demand will come from Alberta, but over 60% of Aurora's Canadian production is coming from that province.

Source: Perspectec

Edmonton Indoor = Mountain (1,200 KG/quarter) and SKY (24,000 KG/quarter)⁴

Questionable Locations

Numerous Facilities & Supply Agreements Make Economies of Scale More Difficult

Expansions, some economies of scale, increased automation and learning should help lower cash costs. Some facilities may prove uneconomical (i.e. Saskatoon).

The production capacity for Aurora is expected to reach an annualized capacity of 390K KGs by the end of calendar 2019 (excluding the 120K KG/year from the 51% owned NORDIC facility in Denmark).

Source: Perspectec

Questionable Locations - Shipping

Biggest Shipping Discounts
in the Industry

Aurora Brands

Aurora offers **FREE** shipping for purchases over **5 grams**

CanniMed offers **FREE** shipping for purchases **over \$99**

MedReleaf offers **FREE** shipping **once every 30 days**

Major Non-Aurora Brands

Aphria offers **FREE** shipping for purchases over **30 grams**

Tweed offers a flat \$4 rate per shipment

Tilray does not have any special shipping options

Aurora Cannabis is eating shipping costs in order to grow their market share.

Questionable Locations w/ Shipping
GM% including shipping will continue to suffer, especially prior to the Exeter facility opening

41% Gross Margin on Dried Cannabis Shipments to Toronto

Assuming dried flower shipment of 6 grams @ \$8 per gram minus e-Commerce commission (\$1.45) = \$46.55. Real cash costs (LQ) of \$1.96/gram = \$34.80. Delivery costs from Edmonton to Toronto is \$15 = real gross margin after shipping of \$19.80. \$19.80/ \$48 = 41%

17% Gross Margin on Cannabis Oil Shipments to Toronto

Assuming oil shipment of 6 gram equivalents @\$14= \$84. e-Commerce commission (\$2.32) = \$81.68. Real cash costs (LQ) of \$8.80/gram = \$28.89. Delivery costs from Edmonton to Toronto is \$15 = real gross margin after shipping of \$13.89. \$13.89 / \$84 = 17%

An issue likely until their Exeter facility opens and begins shipping in calendar 1H 2019

Questionable Locations - Shipping

What is the Edmonton Airport (SKY) Facility Good For?

Geographic coverage of under 2 million people

The new SUN facility is closer to Calgary, leaving SKY in Edmonton as the best point to supply a population of under 2 million across the Territories and Northern Prairies

Retail Outlets will not just be in major centers

The 600+ retail stores and 10,000+ Canadian pharmacies will still require significant ground transportation for the last mile at a minimum.

Things have changed since construction began

Since building Edmonton SKY, ACB has invested in two Denmark facilities to handle European demand. Production will likely be handled in Europe.

Will be good for large emergency orders

Where it makes sense to spend \$30+ to ship by plane the next day, Edmonton might be a good location for Western Canada.

SKY risks being materially underutilized

Questionable Locations - Shipping

Upcoming facility openings and acquisitions helps Alberta, Ontario and Saskatchewan, however EBITDA margin will be hurt with the shipping strategy

Little Economies of Scale w/ Shipping

Orders are delivered individually

SKY facility to Europe will not be able to compete w/ European facilities

Will help with same day shipping, but outside of the Edmonton area will likely not help w/ costs.

No Shipping Synergies in M&A

MedReleaf and CanniMed use Canada Post's Xpresspost with higher prices and thresholds for free shipping. No immediate synergies for rec.

Air Matters Less for Retail

Even with larger recreational shipments, ground (not air) transport will make more sense with retail inventory management systems

Same Day Toronto Model would Lower Margins, Increase Sales

The Exeter, ON facility's 25K KGs/quarter production will reduce shipping costs. 2.5 hours to Toronto similar to 'MOUNTAIN's distance to Edmonton.

Shipping Requirements will Translate to Another Acquisition

With no B.C. presence, Aurora will be pressured to buy **Ascent Industries** in the Vancouver area. If Aurora doesn't buy Ascent, they will be paying higher wholesale prices

Questionable Locations - Shipping
 Higher quantities sold have not improved leverage

With no warehouses and using Canada Post & Purolator for deliveries outside of Alberta, high shipping costs are unlikely to change until calendar Q2 2019. Even then risks exist with a new facility in the competitive Ontario market.

Source: Perspectec

Questionable Locations

Aurora Sky in Edmonton
(shipments starting this year)
will require material electricity
/ natural gas

Major Greenhouse Locations of Big 3:

ACB Avg. Edmonton Temp = 2.6°C

ACB Avg. Medicine Hat Temp = 6.1°C

ACB Avg. Exeter, Ontario Temp = 7.9°C

WEED Avg. Niagara-on-the-Lake Temp = 9.2°C

APH Avg. Leamington Temp = 9.6°C

Questionable Locations & Worsening Production Conditions

Biggest Costs of Greenhouses
are Utilities and Labour

In this Cut Flower Greenhouse example:

Labour = 38% of total costs

Utilities = 21% of total costs

Labour is likely to be a lower % for the
SKY and SUN facilities. SKY will still
require 400 employees.

Table 16: Production Costs and Returns for Cut Flower Producing Greenhouses, 2011

			Production Area: 2,994 sq. m.

Worsening Production Conditions

Alberta's Electricity Rates are Skyrocketing

August's variable rate was ¢9.837 per kWh and is trending higher. This may continue with legislation pushing for the elimination of coal power. Aurora Cannabis does not qualify for the regulated rate (red line).

Source: Ontario Energy Board

Worsening Production Conditions

Ontario Electricity Costs are now Competitive with Alberta

Ontario Charges Either by Time of Usage or Total Usage

effective date (mmm yy) Source: Ontario Energy Board

Ontario's kWh electricity rates are holding steady after coming down from 2016 peaks. Over 50% of hours in Ontario are off-peak. This gets to a rate of between ¢8.9 and ¢11 per kWh.

Greenhouse use roughly 1/10th the electricity of indoor facilities

Total Usage Charges

First 600 Kilowatt Hours per month:	7.7 cents/kWh
Above 600 kWh:	8.9 cents/kWh

Source: Ontario Energy Board

Worsening Production Conditions

Since 2016, Ontario Natural Gas with OEB Regulation are now competitive with Alberta

Adjusted Cash Cost per gram

= (IFRS Cost of Sales before fair value adjustments

- Non-Cannabis Related Cost of Sales

- Depreciation

+ Reported (or estimated) accessories, oil conversion costs, and packaging costs

- Reported (or estimated) shipping costs)

/ # of Equivalent Grams Sold

Unusually High Oil Conversion Costs

Unlike Aphria and Canopy, Aurora does not make it possible to calculate cost per gram in segmented inventories

Inventory is comprised of:

	Capitalized cost	Fair value adjustment
Harvested cannabis	\$ 2,367	\$ 4,149
Harvested cannabis trim	506	775
Cannabis oil	1,591	1,668
Packaging and supplies	705	--
	\$ 5,169	\$ 6,592

Examples of Aphria and Canopy show KG of inventory. Cost per gram equivalent can be worked out for Aphria (\$1.72 average per gram) and details as to what is included are easily available. Canopy saw a cost per gram of \$5.23 for its inventory on a relatively large amount of cannabis oil.

During the three and nine months ended February 28, 2018, the Company recorded \$2,355 and \$6,447 (2017 - \$1,536 and \$3,770) related to production costs. Included in production costs for the three and nine months ended February 28, 2018 is \$62 and \$157 of cannabis oil conversion costs (2017 - \$50 and \$93) and \$71 and \$169 related to the cost of accessories (2017 - \$27 and \$27). Included in cost of sales is amortization of \$473 and \$1,362 (2017 - \$236 and \$718). The Company also included \$237 of amortization in inventory for the three and nine months ended February 28, 2018 related to capital assets utilized in production. During the three and nine months ended February 28, 2018, the Company expensed \$3,443 and \$7,250 (2017 - \$1,104 and \$3,676) of fair value adjustments on the sale of its biological assets included in inventory.

The Company holds 1,738.1 kilograms of harvested cannabis (May 31, 2017 - 668.5 kgs), 426.9 kilograms of harvested cannabis trim (May 31, 2017 - 140.1 kgs) and 5,053.8 litres of cannabis oils or 842.3 kilograms equivalent (May 31, 2017 - 1,091.3 litres or 181.9 kilograms equivalent) at February 28, 2018.

Source: Aphria February 28, 2018 financial statement Note 8

At June 30, 2018, inventory quantities amounted to 19,721 kilograms of dry cannabis. Of this amount, 2,594 kilograms was finished goods available for sale; 6,576 kilograms of product in process of testing and awaiting release for sale, and 10,551 kilograms of extract-grade cannabis held for conversion to oils and capsules. This compares to March 31, 2018 when a total of 15,726 kilograms of dry cannabis was in inventory, comprised of 2,982 kilograms of finished goods, 3,480 kilograms of product awaiting approvals to be released for sale, and 9,264 kilograms of extract-grade cannabis being held for conversion to oils and to capsules. In addition, the Company had a total of litres of cannabis oil, ranging from concentrated resins, or refined oil, to oil in its finished state and available for sale, up from 6,969 litres held at March 31, 2018, also ranging from concentrated resins to finished oils available for sale. The Company also had 1,055 kilograms of capsules on hand at June 30, 2018.

Source: Canopy June 30, 2018 financial statement Note 8

Source: Perspectec

Aurora risks seeing lower gross margins on larger oil sales. No visibility on oil inventory.

Aurora's costs are 20x that of Aphria

Source: Aurora

Aurora highlights its low costs for dried cannabis, but excludes cost of accessories, purchases from other wholesalers, and oil conversion costs.

Does not make obvious why its cost to convert Dried Flower to Oil on a gram equivalent basis is so high.

Unusually High Oil Conversion Costs

No visibility into inventory splits translates to a higher risks that major swings in cost of sales can take place with either Oils or Dried Flower

Unusually High Oil Conversion Costs Worries Around the Recreational Cannabis Oil Market

Canopy Growth is focused on zero calorie Marijuana drinks aided by its partnership with Constellation Brands (Corona brand owner) by the 2nd half of 2019. Tweed can win the marketing battle.

We Forecast a 12% Market Share for Aurora in recreational concentrates and digestibles vs. 25% Canadian market share for Canopy Growth and 15% share for Aphria.

Aphria has managed to reduce its oil conversion costs to a fraction of Aurora's. **Aphria can offer a quality / price position that makes Aurora uncompetitive**

Aurora's Cannabis Oils

Unusually High Oil Conversion Costs

Higher Risks that Oil Conversion Costs will Hurt Gross Margin Moving Forward

- CanniMed nor MedReleaf provide average Oils per Gram production costs despite CanniMed being the public LP most heavily weighted to Oil Production
- Aurora has invested in Radient Technologies and HempCo. to provide it with lower cost extractions, but few details are available as to their proven conversion costs.

Management anticipates that Hempco will provide further product differentiation for the Company, as well as, subject to regulatory changes anticipated for 2018, provide substantial supply of low-cost raw material for the extraction of CBD.

Source: Aurora

Radient manufactures high-value natural ingredients for global customers in the Food and Beverage, Nutrition and Supplements, Pharmaceuticals and Active Care industries. Since the latter part of fiscal 2017, the Company has expanded its offerings to the fast-growing cannabinoids market utilizing an extraction platform to process and extract cannabinoids including cannabidiol ("CBD") and tetrahydrocannabinol ("THC") from cannabis biomass.

Source: Radient Technologies

PERSPECTEC - FOR LICENSED USERS ONLY

Unusually High Oil Conversion Costs

Acquired Stock in Radiant Technologies to Lower Oil Extraction Costs

*“We have acquired a chunk of stock of a company called Radiant Technologies it's located in Edmonton as well and this is a company that has a **proprietary system for the extraction of cannabinoids from cannabis that is superior to the gold standard now** the gold standard right now is supercritical CO2 this is more efficient and has vastly greater throughput than standard supercritical CO2”*

– Chief Communication Officer Cam Battley at an Investor Conference

Radiant Technologies Market Cap. is about \$300M

First I'd like to say that it takes over 2 weeks to sign up with Aurora. My doctor submitted my paperwork to other licensed producers before and I was able to start ordering with them in a matter of days. Aurora on the other hand took 2 weeks to get in touch with me by email. After that it took another week to get everything set up before I was able to order products.

Unimpressed With Aurora

Aurora has the worst customer service out of five LPs I have supported. They fail to answer email, their registration process is a nightmare, and the person working the live chat is incapable of offering any useful assistance and simply repeats information that is already available on the website. They wasted far too much of my time. Avoid if at all possible.

Overall An Excellent Lp

The only downside with Aurora is their pricing. I wish they had more variety in their pricing rather than have everything at \$9/gram. That said, their same day delivery in Alberta is incredibly convenient and their product quality is consistent. Their app, while not the most convenient to update, is very easy to use.

Quality Went Downhill

I was with Aurora for a year and switched to broken coast. Aurora's price was good but quality of bud was lacking.

Amazing Company!

Aurora has great cannabis. After over 10 months, I have not had issues with my product. They are steadily decreasing their THC & CBD percentages in bud form, but with their compassion pricing, ZERO complaints. I will be with them for the foreseeable future. Taste, smell and looks are spot on, and I love clean cannabis!

Great Company, Free Shipping Makes Them Above Everyone Else

Great company with great products, they don't have as much selection as other companies but that's because they have fine tuned their products and they are great! the free shipping definitely tips the scales for me and their great compassionate pricing for those who need it.

I enjoyed Products from Aurora all last year and I really enjoyed everything that I tried. Try Aurora if you need good buds! I hope they continue to pair with other companies like Broken Coast to give medical marijuana users more variety .

Go Aurora! I liked that they give you a free \$50 on your first purchase and they sent stickers as well!!

Patient Growth is coming from pricing discounts and shipping

PERSPECTEC - FOR LICENSED USERS ONLY

Source: Perspectec

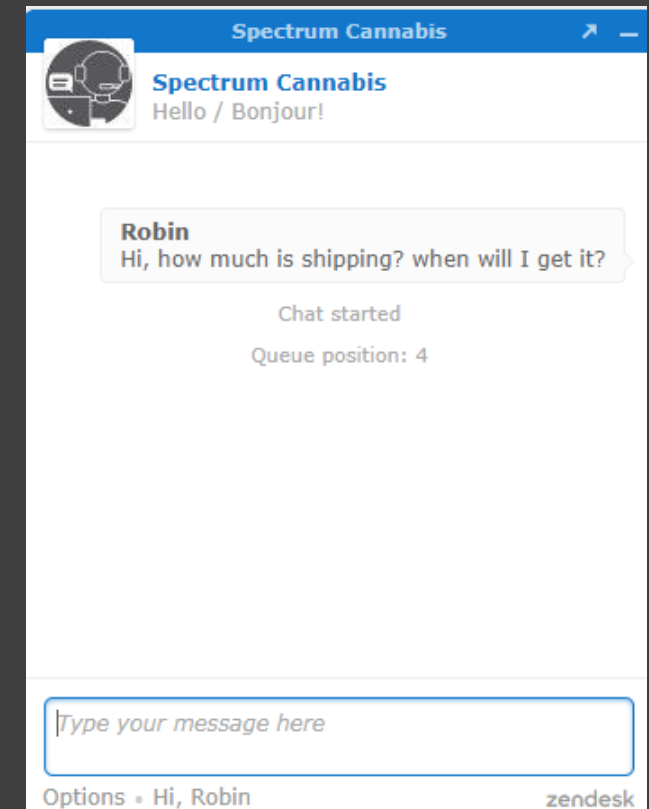

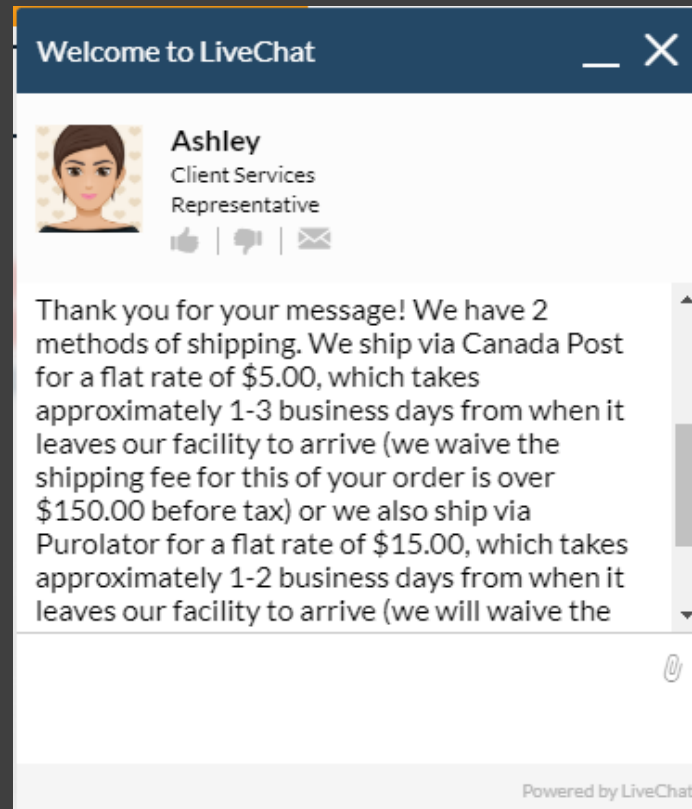

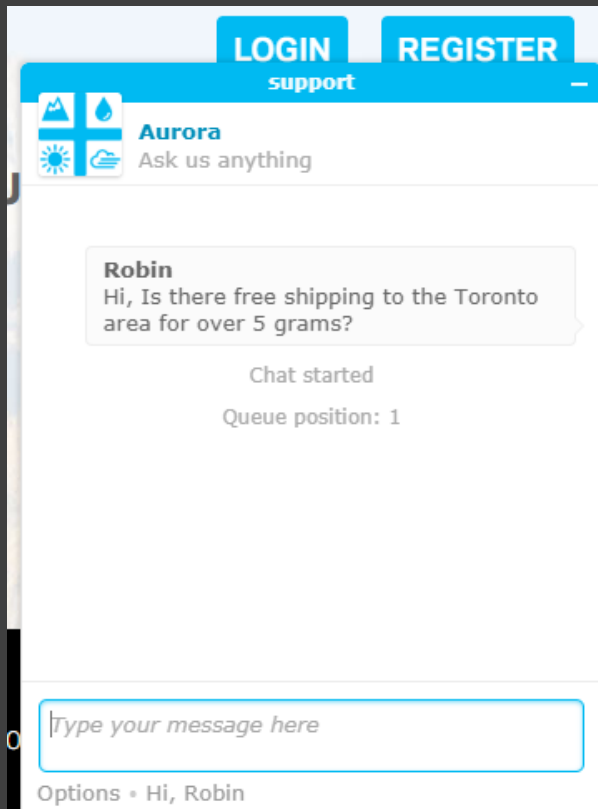

quarter over quarter. As of the date of this prospectus, over 17,000 patients are registered with the Company which is up from 10,224 patients as at the end of the second quarter of 2016. According to Health Canada, the total number of patients in the ACMPR or successor programs is expected to reach approximately 450,000 by 2024. Growth of the total number of patients is currently tracking well ahead of Health Canada's growth estimates, with historical growth trends indicating a market potential increase in excess of 1,000,000 patients by 2024:

CanniMed patients increased from 10,224 on June 30, 2016 to over 17,000 by it's IPO on Nov. 25, 2016 due to the introduction of Cannabis Oils in June, discounting prices 25%+ and offering renewals of up to \$500 in July of 2016.

Aurora has a large percentage of positive reviews come from Albertans happy with its shipping times

In May 2016, the Company launched a same-day delivery of medical cannabis to clients in Calgary, Edmonton and surrounding communities. More than 75% of Aurora patients in the Metro Calgary area are receiving their product orders within 24 hours, through same-day delivery and subsequently-introduced overnight/next-day delivery.

Red Flag with Management

CEO Owns a Little and Sells a Lot Above \$7

Red Flags with Management

M&A is Unlikely

Terry Booth – Chief Executive Officer

Source: Aurora filings

The Company entered into an employment agreement with Mr. Terry Booth effective January 1, 2017 which provides for his annual base salary of \$325,000, four weeks' annual vacation, participation in bonus plans and restricted share unit plans, bonuses of up to a maximum of 35% of the annual base salary, to be approved by the Compensation Committee, and eligibility to participate in the Company's standard benefit plans. The Company may terminate the employment without cause by providing Mr. Booth reasonable and adequate notice, or salary in lieu of notice of twelve months' base salary plus one additional month per year of service, calculated on a pro-rata basis, with this calculation commencing as of July 1, 2013 to a maximum of 24 months' notice or base salary in lieu thereof. No change of control provisions were included in Mr. Booth's employment agreement. On September 25, 2017, the Board approved a Management Bonus Plan with an increase to Mr. Booth's bonus target to 75% of his base salary.

Details on the operational / financial targets for the Management Bonus Plan are limited

32

The Board has approved a bonus plan that is meant to increase corporate performance, profitability and shareholder value. Under the plan, cash payments are made when predetermined operational and financial targets are met. In addition, the Compensation Committee factors into the bonus its assessment of each executive officer's respective contribution to this achievement.

For the fiscal year 2018, the Board approved a management bonus plan (the "Management Bonus Plan") composed of corporate, divisional and individual measures and based on a percentage of base salary determined by the position level. The CEO has a Target percentage incentive level of 75%. Other NEOs have a Target percentage incentive level of 50%.

Conference call

Robin Manson-Hing <robin.manson-hing@perspectec.com>
to marc.lakmaaker, Mishma, Saif, Catherine ▾

Mon, Aug 13, 12:54 PM

Hi Marc,

My name is Robin Manson-Hing and I run Perspectec, an equity research investment advisory firm based in Toronto.

We are getting ready to launch coverage on Aurora and were wondering if you have availability this week to talk to us about your company and any questions? a 30-minute call might be good enough.

After twice requesting to talk to two different people in IR, and noting we wanted to talk about “*operations, things like shipping, energy inputs, and some accounting stuff*”, there were no follow-ups.

We have had face to face meetings with other major LPs such as Aphria and Canopy Growth and conference calls with a number of other LPs with no issues. **Aurora Cannabis is the only LP avoiding a discussion with us.**

Red Flags with Management

Why the under-production?

Produced only 2,212 KG in Q4 vs. a capacity of at least 3,950 KG even excluding Aurora Sky. Low depreciation in CoGS indicates little/no sales from Aurora Sky

From Aurora Cannabis' Fiscal Q4/18 MD&A

	LOCATION	SIZE	CAPACITY	STATUS	LICENSE

Current capacity for Saskatoon is 7,000 kg/year

Red Flags with Management

No other major LP so obviously hides inventory levels and production delays

Martin Landry

And it would be very interesting for us if you can share where your inventory stands right now today in terms of kilos inclusive of MedReleaf. Is that something you can give us some color on.

Glen Ibbott

Martin, we're prepared for the demand from the provinces from the territories. We're going to meet the initial POs. What we're focused on and why I don't want to get into specifics of those two, how much we've got is I think what's more important is, which products you have and how quickly are they going to move. For instance, as Cam has mentioned you're well aware of this, we've made a significant investment in preparing for pre-rolls that have massive inventory of pre-rolls, which we think are going to be a high demand product. But to measure that in terms of kilograms, sitting there isn't really instructive, so I don't want to get into that right now other than to say, we will meet all the commitments we've made in the provinces, the Canadian medical system and be able to export to Germany. But I know over the next few months, we'll be getting a lot more clarity after we see which products the provinces are going to reorder, and what sort of the demand is, so to see how many kilograms we've got right now and how long that might last. But I think it's a little bit of -- it's a little misleading to our investors to focus on that too much, other than to say we're prepared.

Source: Seeking Alpha

Martin Landry

Cam, at the Investor Day in July, you seemed to confident that you would have all rooms in production at Aurora Sky by September, October. And now it looks it's going to be more like December. So I'm wondering if you can give us a little bit more color as to what's causing the delays there.

Cam Battley

I don't think we're seeing delays. We do have to work with our regulator and we have to abide by what health Canada allows us to do. But I think we said back then that we anticipated being at full capacity towards the -- at the end of calendar 2018 or the beginning of calendar 2019, and we're very much on track with that and that's what matters. So we're intending to be at full capacity at that point turning out 800,000 plus kilograms a month.

Aurora finally held an earnings conference call for Q4/18

On September 25, 2017, the Company adopted an ESPP whereby eligible employees may contribute to the ESPP at least 1% but no more than 10% of their annual gross salary up to a maximum of \$10,500, to purchase common shares of the Company in the open market at prevailing market prices. The Company contributes an amount equal to 50% of the employee's contributions which are expensed as incurred as there are no vesting provisions.

The Company contributed \$58 to the ESPP during the year ended June 30, 2018.

Source: Aurora Cannabis

Assuming 1,400+ Aurora employees at the end of September, the **average amount spent by each employee on ACB's stock was ~\$20 in fiscal Q4** despite 50% matching by Aurora contributions. This is down from \$57 LQ.

Located primarily in the U.S. and Mexico, **Constellation Brands' 9,600 employees spent >\$300 on average per quarter** last year despite only receiving a 15% discount on its stock.

Red Flags with
Management
Employees aren't buying
what Aurora is giving them

Red Flags with Management

We agree with Bruce. Leaking M&A discussions does not typically lead to being acquired

“Did you have me on your show to talk about the rumors of doing something with Constellation? No. So I think at the base of things people have to learn how to run their business so its not a public discussion. These deals fall apart when you make them a public discussion”

Bruce Linton, CEO of Canopy Growth (CGC) on BNN Bloomberg, September 18th, 2018 in response to questions about Aurora and Coke

Red Flags with Management

2018 European dried cannabis sales are 89% greater than 2017 European revenue in the statements shown on the prior slide.

No public explanation given.

Source: Aurora Cannabis Fiscal Q4/18 MD&A

Overstated International Opportunity

The fiscal Q4/18 MD&A does not show the restatement

Overstated International Opportunity

The German Government is Looking for Supply Equal to 4% of the Expected Canadian Recreational Market. Lots of Speed bumps.

The German Market by 2022 is Not Material – While Germany is the most discussed market, their government is looking to have a number of companies supply only 10,400KGs of cannabis product per year by 2022. This would be 4% of our estimated Canadian recreational demand.

Doctors reluctant to supply - In November of 2017 *The Local* took found cannabis had gotten off to a slow start in Germany as doctors were still reluctant to prescribe it to patients. *“the majority don’t know anything about it, don’t want to have anything to do with it, and are afraid that they could be put in some sort of corner by their colleagues.”* – German user.

Insurance companies not reimbursing - Meanwhile insurance companies also often turn down the request for them to pay for the drug, claiming the case isn’t “serious.”

Germany does not allow chain pharmacies - An owner can only have up to four pharmacies at most. Aurora needs to convince a lot of people to carry their product but this is likely not too difficult.

Doctor prescribe a strain, pharmacy needs to carry that strain vs. Canada where the prescription can be filled and shipped online and user can choose LP.

Overstated International Opportunity

European ASPs (mostly Bulk) are Lower Than Canadian ASPs

“The consolidated average selling price per gram sold decreased from the Dec 31, 2017 period (\$8.36) to \$7.99 as the company increased wholesale bulk sales of dried cannabis.”

“(Aurora) distributes wholesale medical cannabis in the European Union pursuant to the German Medicinal Products Act and German Narcotic Drugs Act, and in Italy through the January 2018 tender process.”

Source: Q3/18 MD&A

This trend should continue.

MedReleaf will help mask this in the near-term.

Source: Perspectec

Overstated International Opportunity Headwinds Exist

Aphria CEO Vic Neufeld on August 29, 2018:

"I can tell you with a very high degree of confidence that...in two years time, Germany will have in-country cultivation only. Italy will have in-country cultivation only...and even in the U.K. it will be import but eventually they'll want their own....Because they can add a level of enforcement of site visits, yank your license. It's the economic benefits, it's the employment..."

Available Global Market for Canadian Cannabis LPs

Source: Perspectec

Overstated International Opportunity

We est. Global sales as a % of ACB will decrease from 8.8% in fiscal '19 to 4.0% in '21 as legislation and matching doctors with strains will be slow. Other producers have time to increase supply.

We estimated the Global Demand for Germany, Australia, Italy and Denmark considering the existing patients and its growth based on the respective country's population.

We expect Aurora to take a roughly 15% share with European Demand catered by Nordic facility in Denmark and CanniMed catering to the Australian market.

However imports from Edmonton will likely not be able to be competitive versus local players.

Source: Perspectec

Source: Perspectec

The 51%-owned Nordic facility expects to have production capacity of 30,000KGs/Q. However European medical legalization want diversification. Doctors are slow to prescribe. We est. ~9,000 KG equivalents/Q of European demand for ACB by fiscal 2021 at mostly wholesale prices. Other businesses lines will be dwarfed by the Canadian recreational market.

Overstated International Opportunity
The Nordic production facility may be forced to materially lower its ASP and ship outside the E.U.

Vertical Integration is Disappointing

Vertical integration a long-term bet against commoditization using investors cash...

Attempts to Improve Recreational Gross Margins

- Choom Holdings (CHOO-CSE) – 6% ownership – Looking to be front and center/take more margin at Choom stores
- Alcanna - (CLIQ-TSX) - 25% ownership – Looking to be front and center/betake more margin at Alcanna retail stores

Attempts to Improve Production Gross Margins

- Micron Waste Technologies - 6.5% ownership (MWM-CSE) – To use their Cannabis Waste Digester to lower cost of sales
- CTT Pharmaceutical - 9.14%, option to increase to 42.5% - Exclusive use of oral thin films wafers for medical products

Attempts to Improve Non-Production Gross Margins

- The Green Organic Dutchman Holdings (TGOD-TSX) – Negotiated a supply agreement for 20% of their cannabis production
- Capcium - 19.99% - Production of softgel capsules at its Montreal facility
- Cann Group of Australia (CAN-ASX) – 22.9% ownership – Uses Larssen for project management (55% gross margin)

Attempts to Improve R&D Expense

- Evio Beauty Group - Are developing lifestyle and cosmetic products using hemp seed oil

“EBITDA Margins...I’m not going to tell you what ours is...35(%) that's what I hear most commonly, 35% EBITDA (margins)”

....Sorry Cam, but we think Aurora will be lucky to see half this margin by fiscal 2021

Cam’s Statements in October 2017 on what EBITDA Margins will be when reaching scale

EBITDA and Adjusted EBITDA Measures

Source: Aurora Filings

Although EBITDA is one indicator of financial performance and used as a proxy for the earnings potential of a business, in certain circumstances it may not provide useful or relevant information to readers due to inherent limitations in the results. One of these limitations include a company's growth phase, as is currently experienced by Aurora, where quarterly earnings can fluctuate and become less relevant during such periods as the Company focuses on building for long term and sustainable profitability. As such, although EBITDA is positive, management does not currently use measures such as EBITDA or EBITDA-derived metrics to analyze operating performance as the Company's strategy includes a significant emphasis on the building of production and corporate capacity in preparation for domestic and international expansion. In the future, management may determine that these metrics are an appropriate measure of the Company's performance and will disclose and reconcile to GAAP such metrics at that time, however, management's current emphasis remains focused on preparation and execution of well-managed growth.

EBITDA Margins May Be 1/2 of Expectations

Only major LP that does not attempt to reconcile to an Adjusted EBITDA

PERSPECTEC - FOR LICENSED USERS ONLY

Combined Financials of Acquisitions
Recreational and International sales will be a negative to ASPs

MedReleaf acquisition closing in July 2018 will help hide this impact

Source: Perspectec

Aurora is the only major LP that does not report information that allows its CANADIAN Dried Cannabis ASP to be calculated. Aurora sells all its dried Cannabis @ \$9/gram before compassionate discounting.

Combined Financials of Acquisitions

MedReleaf Oil ASPs along with high oil conversion costs make for a worrying Oil gross margin picture

Source: Perspectec

Combined Financials of Acquisitions

MedReleaf's high dried cannabis prices were the reason for its slower sales growth. The Canadian medical market is price sensitive.

Sales for the year ended March 31, 2018 reached a historic high of \$43,646, an increase of \$3,307 or 8%, compared to the prior year same period sales. The increase in sales was primarily due to sales growth for extract based products partially offset by veteran volume capacity and pricing limitations. Extract sales for the year ended March 31, 2018 were \$7,980 and represented 18% of total sales, as compared to the year ended March 31, 2017 whereby extract sales were \$1,263 and represented 3% of total sales.

Source: MedReleaf

MedReleaf sales growth of 8% Y/Y last quarter was primarily due to an increase in Cannabis Oils

MedReleaf's dried flower products sells for between \$6.50 to \$15/gram

17% EBITDA Margins By 2021

A 20x EV/EBITDA multiple on fiscal 2021 EBITDA of \$269 million (16.8% EBITDA margins) = \$5.4 billion + \$550 million in valuation from its investments in associates = an EV of \$5.9 billion. Assuming roughly breakeven net cash by the end of 2021 and 1.2 billion shares outstanding by this time gets us to a target share price of about \$5. We do not foresee Aurora Cannabis being able to achieve 20%+ EBITDA margins.

We see June 2021 forward EBITDA valuations as a figure investors will focus on as the edibles and concentrates market should be established by this time.

While Aurora is likely to continue raising shares and buying companies, this valuation assumes there is no transformational change in Aurora Cannabis. We believe on a practical level the shares should come down to these levels.

Our ACB Target Price is \$5, being reached by September of 2019. We believe investors should **sell the shares now.**

Aurora Has Introduced a Horizontally Integrated Business revenues

Cannabis net revenue represents revenue from the sale of products, excluding revenues from patient counselling services, design, engineering, and construction services, analytical testing services and excise tax recovered from consumer cannabis sales. For Q2 2019 and Q1 2019, cannabis net revenue comprised revenues from both medical and consumer markets, while Q2 2018 cannabis net revenues were comprised of revenues from medical cannabis only. Given that our gross revenue from the sale of goods figure includes excise taxes that were levied and billed back to customers, as reflected in accordance with IFRS 15, we believe that the presentation of cannabis net revenue more accurately reflects the level of revenue earned from cannabis products during the relevant period.
